EDUCATION

UC San Diego, CA – Undergraduate Bachelor of Science in Public Health w/ a Concentration in Biostatistics, Minor in Data Science

September 2023 - Present

- 3.905 GPA
- Instructional assistant for Biostatistics in Public Health

PROJECTS

Recipes & Calories Data Science Project

March 2026

- Created Github repository and [website](#)
- Analyzed the relationship between components of different recipes and their calories using Python
- Reported all data cleaning and statistical tests performed on website
- Created statistical plots to analyze the relationship between different variables

International Health Collective – Clinic Data Analysis Team – student-run nonprofit organization

October 2024 - May 2025

- Transferred survey data into google sheets and performed descriptive statistical analysis
- Created a research proposal to assess if providing personal blood pressure monitors would increase hypertensive patients' knowledge about their condition and prescription adherence

International Health Collective – Clinic and Pharmacy Quality Improvement Project – student-run nonprofit organization

October 2024 - May 2025

- Clinic QI Project; Coordinating and incorporating evidence-informed improvements at IHC's monthly free-clinic in the Tijuana Progreso community
- Took vitals of patients and shadowed physicians at clinic in Tijuana, Mexico while improving Spanish speaking skills to converse with patients
- Created inventory system to track materials such as stethoscopes and Adult/Child Pulse Oxes

SKILLS

Python

Wet lab

Dry lab

Leadership

Google sheets

EXPERIENCE

Gaulton Lab - Lab Volunteer

July 2025 - Present

- Maintained EndoC and HepG2 cells by feeding, subculturing, and splitting cells in wet lab
- Performed cell treatment and culturing, RNA extraction, RNA-seq, and CHIP-seq

UT Austin, TX - Technical Staff Assistant

July 2024 - September 2024

- Completed research project on electrophoretic deposition under biomedical engineering Professor Donglei Fan at the University of Texas at Austin
- Performed literature review on common electrophoretic deposition procedures and electrochemical background
- Troubleshooted with different electrodes, AC and DC field combinations, and electrolyte solutions to determine best environment for ions to deposit on gold nanowires to form various-shaped structures
- Observed deposition under microscope and took SEM images of deposition
- Applied photoresist to gold plates to create different electrode patterns

UT Austin, TX — Intern

August 2023 - September 2023

- Researched animal-like protist Paramecium under biomedical engineering graduate student of Professor Donglei Fan at the University of Texas at Austin
- Did literature review on Paramecium over protozoa culturing and maintenance, environment, and reaction to external stimuli
- Examined Paramecium under microscope and measured sizes of the paramecia observed
- Observed paramecia's reaction to AC and DC electric fields and recorded changes in swimming speed and direction
